## Введение

Настоящий документ представляет собой приложение 1 к формуляру программного изделия «Kaspersky Security Center» и содержит контрольные суммы исполняемых файлов после установки.

Подсчет контрольных сумм неизменяемых компонент программного изделия, установленного на операционной системе семейства Linux, осуществляется утилитой `integrity_checker` из состава программного изделия по алгоритму ГОСТ 34.11. Контрольные суммы представлены в кодировке Base64.

Подсчет контрольных сумм неизменяемых компонент программного изделия, установленного на операционной системе семейства Windows, осуществляется с использованием средства фиксации исходного состояния программного комплекса «ФИКС» версии 2.0.2 (сертификат ФСТЭК России № 1548, действителен до 15.01.2025 г.) по алгоритму ГОСТ 34.11.

Перед подсчетом контрольных сумм установить в программном комплексе «ФИКС» фильтр имен файлов по маске: для компонента «Веб-консоль» – `*.exe;*.js;*.json;*.ts;*.webmanifest;*.xml;*.yaml`, для остальных компонентов – `*.dll;*.exe;*.ppl;*.sys`.

В зависимости от режима установки и установленных компонентов, в системе могут присутствовать не все исполняемые файлы, перечисленные в таблицах.

Для модулей «`libcrypto_ssl*.so`» и «`crypto_ssl*.dll`» контрольные суммы не зафиксированы, поскольку возможно их изменение в рамках устранения обнаруженных уязвимостей.

# Kaspersky Security Center (для Linux)
